

EU ETS AVIATION

Recent EU regulations require aircraft operators to monitor and report verified data on CO₂ emissions arising from aviation activities on intra-EU flights and all flights entering and departing from EU airports. This EU Regulation (Directive 2008/101/EC) is an amendment to the European Union Emissions Trading Scheme (EU ETS).

LRQA has the expertise to help you meet your obligations. Our verifiers at the [LRQA Aviation Centre](#) are well placed to help you meet your obligations under this legislation. We were part of the consortium working for the European Commission to develop the monitoring, reporting and verification guidelines for aviation's inclusion within the EU ETS. We already have performed first gap-analyses at major airlines, to help them to mitigate the risk of any non-compliance before final verification.

We can offer you access to our expertise as an accredited verifier under EU-ETS, combined with the knowledge gained from years of experience working with the aviation sector.

Please use the link to our dedicated [website](#) to find more information on our range of services, and to contact one of our experts.
